

FISHING THE WASHING LINE SYSTEM

SET UP

HOW TO FISH THE WASHING LINE

A: Cast into the wind at a 45° angle. Mend the line until you are in touch with your flies.

B: Allow the ripple on the water to move your fly line, mending the line to remain in touch with your flies.

C: As the fly line moves it will naturally move the tippet due to the drag of the large dry fly on the surface. This will result in the buzzers moving naturally upward as if they were about to hatch!

!! Enjoy the spectacular takes !!
